K-Beam[®] Accelerometer

Туре 8315А...

Capacitive MEMS, Single Axis Accelerometer

Type 8315A ... is a high sensitivity, low noise, single axis accelerometer family which measures acceleration and/or low-frequency vibration in the primary sensing axis. The acceler-ometer features include:

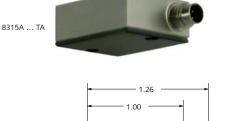

- Measuring ranges: ±2 g, ±10 g, ±30 g, ±50 g, ±100 g, ±200 g
- Frequency response: 0 ... 1000 Hz (5 %) (except ±2 g)
- Bipolar ±4 V, single ended 2.5 V ±2 V and ±8 V differential accelerometer output options
- Operating temperature -65 ... 250 °F
- Low noise
- Excellent thermal stability
- 1 x 0.85 in. footprint
- Wide supply voltage range, 6 ... 50 VDC
- 6000 gpk shock rated
- Conforming to CE

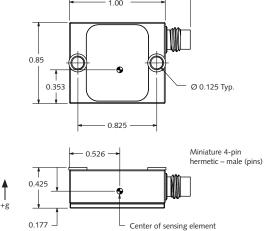

Description

The 8315A ... Capacitive Accelerometer family utilizes a silicon Micro-Electro-Mechanical System (MEMS) variable capacitance sensing element. The sensing element of each axis, consists of a very small inertial mass and a flexure element cantilever positioned between two plates. As the mass deflects under acceleration, the capacitance between these plates changes. AC excitation and synchronous amplitude demodulation circuitry contained in the accelerometer's internal signal conditioner provides an analog output signal proportional to the applied acceleration. This output signal is scaled as a voltage which is proportional to the applied acceleration.

There are 3 housing/electrical interface options (AC, TA, TB) which determine the available output signal formats. The accelerometer is powered by a single regulated supply between 6 and 50 VDC.

The AC option is a hard anodized aluminum housing with an epoxy seal and an integral PVC cable. The maximum temperature range is +185 °F and the available output signal formats are bipolar 0 ± 4 V, single ended 2.5 ± 2 V and differential 0 ± 8 V. The sensing element and electronics are contained in this lightweight housing with an environmental seal and integral ground isolation.

The TA and TB options offer a welded titanium housing with either an industry standard 4-pin, $\frac{1}{4}$ -28 connector or integral Teflon® jacketed cable. The maximum temperature range is +250 °F and the available output signal formats are bipolar 0±4 V (with temperature output), single ended 2.5 ±2 V (with temperature output) and differential 0±8 V. Temperature output is provided if external compensation of the output signal is desired. The sensing element and electronics are contained in a lightweight, welded titanium housing for a fully hermetic design with integral ground isolation. For adhesive mounting, the hard anodized plate, at the bottom of the sensor provides ground isolation. For screw mounting, the sensors are supplied with integral isolation inserts in the screw holes to ensure a ground isolated mount in combination with the hard anodized plate on the bottom of the sensor.

Application

The 8315A ... is an instrument grade, single axis accelerometer. As such, the 8315A ... is well suited for a wide variety of R&D and OEM applications requiring precision measurements and packaging designed for demanding application and handling needs.

In particular, the sensor design is optimized for low frequency applications common to Aviation/Aerospace, Automotive, Civil Engineering Structures, Seismic and other R&D studies. In particular, Aviation/Aerospace ground and flight testing often evaluates dynamics and structural vibration to assess performance parameters, reliability and integrity. Automotive laboratory and road testing often evaluates system parameters such as vehicle ride, dynamics and structural analysis to assess performance parameters, reliability and durability. Civil engineering structures such as bridges often are evaluated for structural response to assess the integrity of the bridge to ensure safety. Seismic ground and structural testing is often performed to measure the effect of earthquakes and other natural phenomena. Other R&D studies include human motion studies, robotics and platform motion control systems for example.

Mounting

Reliable and accurate measurements require that the mounting surface be clean and flat. The accelerometer can be directly attached to the test structure with the supplied screws for a ground isolated mount or with adhesive. Several optional accessories are offered to mount the 8315A ... The 8464K01 is an adhesive mounting base with 2, 4-40 threaded holes to mount the sensor with the supplied screws. The 8464K02 is similar to the 8464K01 except is has a threaded 10-32 hole to provide a ground isolated stud mount. The 8464K03 is similar to the 8464K01 except it provides magnetic mounting for the sensor. The 8522 is a triaxial mounting cube which is used to provide a biaxial or triaxial solution for the 8315A family of sensors. The instruction manual for the 8315A ... provides detailed information regarding mounting surface preparation.
