

Ultrasonic Sensors Selected for Research

MaxBotix® Inc., custom-made sensors are scheduled for micro UAV flight-tests. Weighing in at less than seven grams each, these sensors are an evolutionary extension of the MaxSonar®-EZ line, except with custom high-power drive electronics, integrated sensitive amplifiers and envelope detection and signal conditioning. Arrays of these custom sensors provide the ability to yield long-range real-time detailed situational awareness. www.maxbotix.com
