**NOTE:** all sensors are tested at ambient environmental conditions, with 10 ohm load resistor, unless otherwise stated. As applications of use are outside our control, the information provided is given without legal responsibility. Customers should test under their own conditions, to ensure that the sensors are suitable for their own requirements.

# SO2-AF Performance Data

Technical Specification

Figure 2 Sensitivity Temperature Dependence

Figure 2 shows the variation in sensitivity caused by changes in temperature.

This data is taken from a typical batch of sensors. The mean and  $\pm 95\%$  confidence intervals are shown.

Figure 3 Zero Temperature Dependence

Figure 3 shows the variation in zero output caused by changes in temperature, expressed as ppm gas equivalent.

This data is taken from a typical batch of sensors and the mean and  $\pm 95\%$  confidence intervals are shown.

Figure 4 Response Time vs. Load Resistor

As will all Alphasense toxic gas sensors, increasing the load resistor slows the response time; it also reduces noise for better resolution.
