

End-of-Life Measurements for the Intex IR Sources

End of life is defined as a change in resistance of 10%. Specifications are for a lifetime of >5000 hours (210 days) operating at 10Hz, 50% duty cycle reaching a peak temperature of 750°C. The figure below shows the rise in resistance at the end of life, which is defined as an increase in resistance of 10%.
