

LIGHT EMITTING DIODES

1.6-4.6 μm

Model LED20 2.05 mm 1.1 mW

•Light Emitting Diodes **LED20** are designed for emitting at a spectral range around 2050 nm. Heterostructures (HS) are grown on GaSb substrates. The output emission can be modulated by current flowing in a forward direction.

•Light Emitting Diodes **LED20** are developed for using in optical gas sensors and medical diagnostics. They have stable output power and lifetime more than 10000 hours.

•Related products: **LED20** can be used in optical pair with our photodiodes **PD24**. Our standard **LED Driver** provides power supply of **LED20** in two recommended here regimes (Quasi-CW and Pulsed).
